## General information about the advantages of a combination lock:

Magnetic cards are used widely in the present market because is cheap and easy to make, especially it doesn't need to reuse. Magnetic stripe cards are inexpensive and in some cases are used as advertising, so is very popular in most hotels.

The biggest disadvantage about magnetic cards is they are not long lasting, normally used for about 200 times. This is bad for hotel wait and cleaning staff, because every day employees pass in and out doors more than 100 times, they must replace the magnetic cards often, seriously affecting service efficiency and wasting valuable man-hours of time.

Other issues come to the magstripe reader located inside of the lock itself. The reader head is similar to the head of an old cassette player. It will require regular cleaning and maintenance to be kept in good operating condition. Occasionally these heads will fail due to excess dirt from cards that were in a guest's dirty pocket.

The 6600-73MI is one lock that has both magnetic card and smart card capabilities. Our new Magnetic Stripe lock combined with Smart Card lock is perfect for medium to large size hotels. Under normal conditions, guests use Magnetic Stripe Cards and employees use Smart Cards. Smart cards can be used more than 100,000 times without losing programming. If the Magnetic Card reader inside the combination lock fails or needs to be scheduled for head cleaning, the hotel can offer a guest the Smart Card in place of the Magnetic Stripe card increasing the opportunity to keep hotel's reputation in tact, and eliminating the need for maintenance to immediately clean the heads of the magstripe portion of the lock. The cleaning can be done on the next cleaning cycle and it is not necessary for an after hours special service call to the door.
